

KEEP SENSITIVE DATA SAFE

HPE Defective Media Solutions

HPE DMR and HPE CDMR options help you:

- Reduce security risks with classified, proprietary, and confidential data
- Keep sensitive data compliant with privacy regulations
- Achieve a simpler, more cost-effective solution when you choose not to return a malfunctioning component

Today, business-critical data often resides in places other than a drive. Extend your protection and maintain regulatory compliance with HPE Defective Media Retention and HPE Comprehensive Defective Material Retention.

WHEN DOES A DISK GO BAD?

Let's start with the basics. A defective storage disk is no cause for alarm if your hardware is covered by a Hewlett Packard Enterprise on-site hardware support agreement. A Hewlett Packard Enterprise support agent will diagnose your system problem, dispatch personnel if needed, and provide a replacement part. Once you recover the backed-up data, you are ready to continue working.

It's what happens next that could concern you, especially if you must comply with stringent internal or external data security regulations. Some or all of the data on your defective disk could still be accessible through a variety of tools and techniques. And simply letting the disk and data leave your facilities could subject you to penalties under government regulations like HIPAA, Sarbanes-Oxley, Gramm-Leach-Bliley Act (GLBA), and General Data Protection Regulation (GDPR) in the European Union.

WHAT ABOUT DATA BEYOND MY DRIVES?

Today's speed-intensive, data-driven environments have raised the expectation to put sensitive data as close to the search or transaction as possible. Many times, this means not just drives where the final transactions are stored but places like switch components, memory-retentive system boards and system memory can retain data.

The only way to assure this sensitive data does not fall into wrong hands is to remove that component from ever being put into operation again.

KEEP YOUR COMPONENT. STAY IN CONTROL

You could solve the problem by keeping your defective disk and/or failed data-retentive memory component, but your standard hardware agreement terms require you to purchase the replenishment component if you are not returning the failed one.

While defective media retention is commonplace today, if you are a security conscious company, you might consider adding comprehensive defective material retention service to your hardware support agreement.

A SECURE CHOICE FOR TODAY'S REALITIES

The HPE Defective Media Retention (DMR) HPE DMR lets you keep—and control—your disk and your data. The process closely resembles what happens in a standard service call. If a disk covered by the retention option malfunctions, you call Hewlett Packard Enterprise for support. An HPE support agent will diagnose your system problem, dispatch personnel (if needed) and provide a replacement disk/part.

Solution brief

HPE Comprehensive Defective Material Retention (CDMR)

HPE CDMR allows you to keep all data retentive components. Before the actual replacement occurs, you must inform the authorized HPE support agent of your intention to keep the disk drive/data retentive component. You must also copy the information found on the label of the malfunctioning disk drive/component and provide it to Hewlett Packard Enterprise. The malfunctioning part will then be replaced.

You will be responsible for destroying and/or permanently removing the device from production.

Select the coverage that's right for you

HPE DMR and HPE CDMR are available as options to the support levels identified below. Note that HPE DMR option is a prerequisite to purchasing HPE CDMR.

HPE Foundation Care Call-to-Repair Service

—Offers 24x7 service, including on HPE holidays, with a six-hour call-to-repair time, where our commitment is to have the hardware operational within six hours after your call is opened. Software support is 24x7 with a two-hour response time.

HPE Foundation Care 24x7 Service

—Offers 24x7 service, including on HPE holidays, with a four-hour on-site response time for hardware and a two-hour response time for software.

Features

	HPE Defective Media Retention (DMR)	HPE Comprehensive Defective Material Retention (CDMR)
Available as an extension on HPE hardware on-site offers	X	X
Available for 3, 4, and 5 years	X	X
Covers disk drives only	X	
Allows you to retain disk drives	X	
Covers any product which has memory or other way of storing data		X
Allows you to keep all data retentive components such as memory, PCA I/O cards, network cards, controllers, network devices, CPU, and system boards		X
Provides flexible and contractual hardware on-site services (prerequisite for HPE DMR)	X	
Provides hardware on-site support (including HPE DMR and HPE CDMR)	X	X

HPE Foundation Care Next Business Day Service

—Offers a next-business-day on-site response with coverage available nine hours per day between 8:00 a.m. and 5:00 p.m. local time, on business days Monday through Friday, excluding on HPE holidays. Software support is provided with a two-hour response time.

HPE Proactive Care and HPE Proactive Care Advanced Call-to-Repair Service

HPE Proactive Care and HPE Proactive Care Advanced 24x7 Service

HPE Proactive and HPE Proactive Care Advanced Next Business Day Service

Service levels and actual response times may vary depending on your geographic location. Restrictions and limitations apply.

Additional purchasing guidelines

These services can be configured with a hardware purchase, purchased as a new support contract, or after a previous warranty or support service package expires.
