

Getting ready for the move

HPE Readiness Workshop for Microsoft 365

Introduction

Are you considering Microsoft® 365 as your future office productivity platform? Hewlett Packard Enterprise offers an ideal way to prepare for the transition and migration—built on the HPE proven transformation workshop approach and our extensive experience in implementing Microsoft solutions.

Microsoft 365 offers a unique combination of cloud office productivity services, on-premises products, client operating system and a security suite providing wide range of deployment options designed to best support your **digital workplace strategy**. To take advantage of the platform's benefits in helping your organization collaborate securely and efficiently requires comprehensive planning. **HPE Pointnext** delivers the Readiness Workshop for Microsoft 365 to help you begin this process.

As one of Microsoft's leading global partners, HPE Pointnext has also developed a suite of services aimed at guiding our customers the optimal way to implement, adopt, and fully utilize their cloud or hybrid Microsoft 365 investment.

Description of Hewlett Packard Enterprise offering

HPE Readiness Workshop for Microsoft 365 is a transformation workshop—an excellent approach to help you develop a high-level road map for complex technology transitions. The goal of this one-day workshop is to evaluate the many factors that can help you determine a suitable path for your organization to implement Microsoft 365 successfully. The session format is highly interactive and collaboratively involves all the participants. A number of large graphic panels are placed around the room. These are used as the basis for the interactive discussions covering all aspects of your digital workplace transformation to Microsoft 365. The key points are documented and put into the context of the high-level transformation road map. The complete workshop documentation is provided in the form of a workshop report.

Features and benefits

During this one-day workshop, and depending on your specific requirements for the scope, the following topics may be covered:

- Introduction to Microsoft 365 including Office 365, Windows®, and Enterprise Mobility & Security
- Your specific business drivers for the digital workplace transformation and Microsoft 365 pros and cons
- Microsoft 365 lifecycle including, but not limited to infrastructure optimization, identity and access management, typical use cases of the platform workloads, support, operation and management of change

- Implementation options for Office 365 and data migration
- Windows operating system and client application transformation
- Information security and data privacy in the context of your organization's specific compliance requirements

The interactive nature of the session is intended to enable your team to:

- Leverage expertise from HPE Pointnext
- Verify that the scope reflects your organization specific business drivers and strategy
- Identify your priorities for the transformation
- Build a high-level transformation road map

Conclusion

The adoption of cloud technologies is one of the current major trends. HPE Pointnext has developed, over multiple engagements, a logical approach to help organizations transform their digital workplace into a modern platform leveraging the best of Microsoft's cloud technologies. The HPE Readiness Workshop for Microsoft 365 is a one-day highly interactive event that aims to deliver real value by guiding you in aligning your specific requirements with the many criteria that need to be considered when planning the move to Microsoft 365. This service is part of a larger services portfolio covering the full lifecycle of Microsoft 365 platform.

Contact your representative from HPE Pointnext to find out more about how the readiness workshop can help your organization prepare and plan for the cloud adoption.
