ARE YOU MY Infrastructure Type?

TAKE THIS SHORT QUIZ TO SEE WHICH INFRASTRUCTURE TYPE CAN HELP YOU BRING OUT THE BEST IN YOUR BUSINESS.

What's your implementation style?

1. Standard/Optimized Infrastructure
   - Hardware that’s loaded, configured and ready to go.
2. DIY
   - Bare metal hardware to load and configure as needed.
3. Open Infrastructure
   - Like iLO, Insight or OneView.

How many servers do you run?

1. <10,000
   - Small Web-Hosting Providers and Enterprises
2. 10,000+
   - Typical Web-Hosting Providers
3. >1,000,000+
   - Cloud-Scale Providers/Cloud Giants

How resilient are you?

1. SOS! Don’t leave me now!
   - Can your applications tolerate server downtime?
2. WHAT OUTAGE?
   - Is it The Worst Day Ever when a server goes down?
   - Still feel okay if one of your servers goes down?
   - You’re probably ready for an open infrastructure.

Do you use built-in tools from a hardware vendor?

1. YES
   - I <3 my hardware vendor/s.
2. NO
   - Go open source, or go home.

Can you redeploy staff for firmware management, driver testing or management scripts?

1. NO
   - Not that I’m high maintenance, but I do expect a certain level of on-site support.
2. YES
   - There’s plenty more fish in the sea.

Is a parts-only support model good enough for you?

1. NO
   - Business is so much sweeter with the right infrastructure by your side.
2. YES
   - I need space in my server support relationships.

SCORING

See where most of your answers land— on the left or the right. That’s likely the best infrastructure type for you.

Standard/optimized infrastructure answers:
1. Value add
2. A or B
3. SOS!
4. Yes
5. No
6. No

Open infrastructure answers:
1. DIY
2. B or C
3. What outage?
4. No
5. Yes
6. Yes
