

# Transition Solutions

**HPE Financial Services** can help customers find new ways to plan for, acquire, consume and adapt the technology systems needed for business transformation.

Every day, Enterprises are managing some sort of transition, be it in their data centers, or more broadly across their entire business. You're experiencing it and so are your peers around the globe. In fact, it's happening on such a large scale, IDC asserts that "over the next three to four years, digital transformation efforts will no longer be "projects," "initiatives," or "special business units" for most Enterprises. They will become the core of what industry leaders do and how they operate."<sup>1</sup>

With transformation comes transition. This can be a complex endeavor, sometimes as complex as the transformation itself. Whatever your transformation objective, there comes a whole host of transition considerations. Are you trying to manage the retirement of older generation technology while seamlessly acquiring and installing a new composable infrastructure? Are you consolidating data

centers to improve efficiencies and lower costs with the new HPE Synergy or HPE ProLiant Gen10 platforms? Or are you trying to prepare your in-place infrastructure so that over time you can transition to a cloud-based environment provided through the Cloud 28+ program? Whatever the scenarios, we have a wide range of transition solutions that can help you make the move faster and easier.

Transition management services from HPE Financial Services include:

**Asset removal and value upcycling—**

Retiring your data center technology in a secure, compliant, and environmentally friendly manner can be a complex process. We can help simplify your efforts. We offer data center upcycling solutions that help you manage your IT assets on a one-time or on-going programmatic basis.

<sup>1</sup> IDC FutureScape: Worldwide IT Industry 2017 Predictions, November 2016 #US41883016

**Security auditing and data cleansing—**

We are committed to maintaining your brand's credibility and security. Depending on your specific requirements, we help you ensure data security and regulatory adherence. This can be completed in our facilities or at your site. Our programs extend globally, providing you with the same level of integrity, process control and expert support regardless of where your assets may be located.

**Data center moves or consolidation—**

Ease the burden of moving from your current to new infrastructure with a suite of solutions that are designed and configured with you in mind. To help facilitate, we can help you create a duplicate infrastructure consisting of similar hardware, all with pre-configured and loaded applications prior to your transition. This swing kit has the flexibility to be used on a temporary basis or converted into your long term infrastructure.

**Secondary platforms including testing facilities, demo builds and proof of concepts—**

We can support your technology requirements related to isolated environments that can be built, configured and maintained independently from your main infrastructure. This includes all data center equipment and can be arranged for any length of time you require.
