The Cloud Adoption Program

We’ll get you to a reliable cloud, faster

Based on the Cloud Technology Partners (CTP), a Hewlett Packard Enterprise company, best practices from hundreds of successful engagements, the Cloud Adoption Program (CAP) is a proven offering that brings together leading technologies, services, and methodologies to accelerate cloud adoption for your enterprise.

The CAP is different from consulting engagements in that we don’t just facilitate your transition to the cloud, but also empower your team by transferring our templates, methodologies, and cloud best practices as part of an actionable plan for your organization.

Table 1. A comprehensive approach to enterprise cloud adoption

Supporting a broad base of platforms
Managing a growing portfolio of $800 billion in assets under management, Natixis wanted a cloud environment that would support their expanding business needs.

After designing an AWS environment that addressed all elements of cloud networking, security, and governance, CTP migrated key applications, workloads, and databases to AWS.

“The Natixis engaged CTP based on their expertise in building stable and scalable cloud infrastructure on AWS. Their end-to-end approach to cloud adoption, spanning strategy to production operations, combined with their experience of financial services firms, gave us the confidence we needed to move our business line to the cloud.”

– George Marootian, EVP, Head of Technology at Natixis Global Asset Management

The five phases of CAP

CAP provides a clear, safe, and reliable path for end-to-end cloud adoption. The 5-phased approach begins with a workshop to align your team around a common cloud vision.

Phase 1: Workshop
Phase 2: Assess and plan
Phase 3: Build
Phase 4: Migrate
Phase 5: Operate
