As enterprises leverage the power of connectivity to generate business value, they are investing in expanding IT infrastructure to process exponentially more data. This technological advancement has the ability to advance the way we live and work, but it demands a renewed focus on sustainable innovation.

Living Progress is HPE’s plan to sustainably meet the technology demands of the future by driving a circular economy, investing in our people, and operating responsibly.

“We believe that technology’s greatest promise lies in the good we can do and the challenges we can overcome—together. That is why our purpose is to advance the way people live and work.”

− Antonio Neri, CEO, HPE

Driving the circular economy by maximizing performance with minimum impact

We embed security, efficiency, and resilience across our value chain and enable our customers to achieve more with less. This year, HPE servers continued to exemplify sustainable innovation with the highest levels of efficiency and security on the market, and our new Circular Economy Report enabled customers to measure progress toward their own financial and sustainability goals when retiring IT assets.

Less energy and materials

60% reduction in energy use for customers using Memory-Driven Computing

78% of suppliers set or committed to set science-based emissions targets

89% of the 4 million units returned to our Technology Renewal Centers were refurbished

Investing in our people
to foster an inclusive and purpose-driven culture

People are our greatest asset. Our inclusive environment is behind every innovation, and we’re investing in our communities through record-high engagement in our HPE Gives program. We are fostering equal opportunities for all employees with new industry-leading benefits and are using our strength as a technology leader to set girls and underrepresented minorities on the path to STEM careers. Leading by example, our Board is one of the most diverse in the industry.

Operating responsibly
and building trust through ESG leadership

We firmly believe that trust, integrity, and strong ESG performance are core to our business success. This extends from how we operate, to our supply chain and products, and is the foundation to remaining a trusted partner for our customers. HPE audits its supply base annually to ensure conformance with our industry-leading environmental and human rights standards. In 2018, HPE raised the bar significantly for our suppliers with new stringent requirements in our social and environmental responsibility scorecard, which directly informs HPE purchasing decisions.
