**Seven Benefits of Automating Your IT Management**

1. **Save Time**
   - By automating IT management tasks, organizations can save time, allowing IT teams to focus on higher-value activities.

2. **Ensure Availability**
   - Automating IT management can enhance your ability to deliver applications and services. Consider how automating your environment can offer additional benefits.

3. **Speed Time to Market for New Apps and Services**
   - With automated IT management, you can bring new apps and services to market faster, improving time to market.

4. **Reduce Costs**
   - Automated management platforms can support new tools and processes that make your infrastructure run even better, optimizing configurations based on usage.

5. **Increase Security**
   - The best modern platforms can preempt infrastructure failures and outages, and predict and mitigate security vulnerabilities.

6. **Optimize Infrastructure**
   - Using an automated platform to increase visibility across multiple infrastructures, you can ensure full utilization of each resource, only adding infrastructure when current resources are at capacity.

7. **Facilitate Workload Migration**
   - Migration between infrastructures can be far easier than in the past, and the interdependencies between them—make mapping—which shows what resources are deployed.
