

# PROTECT YOUR CONTAINERIZED APPLICATIONS EVERYWHERE WITH HPE SOLUTIONS

Containers are the new frontier of virtualization, and enterprise-scale containers are here to stay. Supporting and protecting them is critical for any IT department.

## WHY PROTECT?

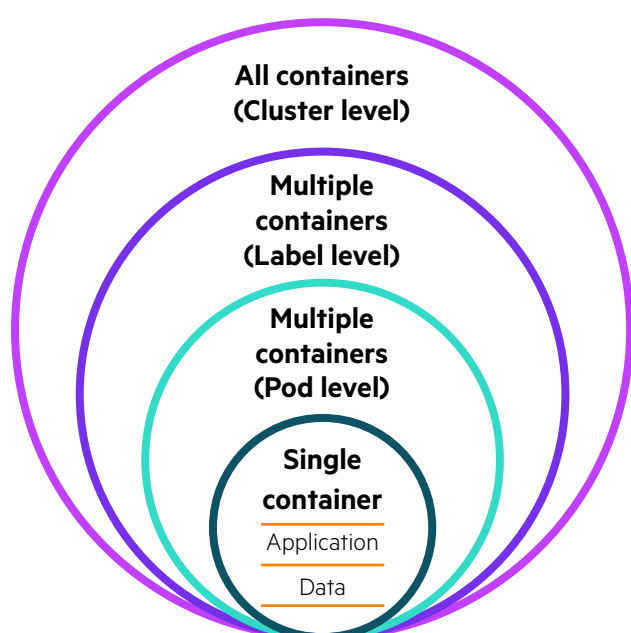

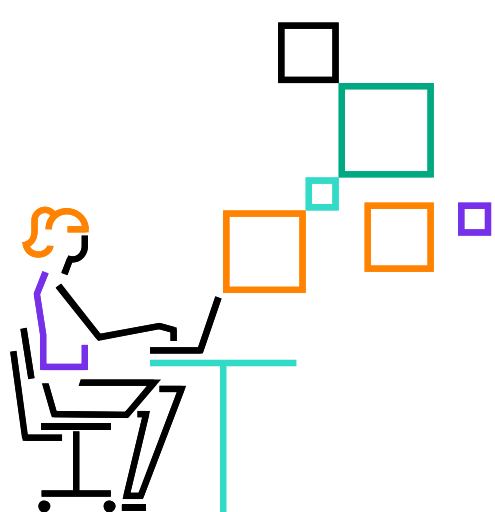

### CONTAINER PROTECTION IS MORE THAN BACKUP AND RECOVERY

- Recover containerized applications from failures and disasters
- Replicate or migrate containers from one environment to another (for example, from test/dev to production)
- Move container clusters to/from the cloud, on-premises, and even the edge

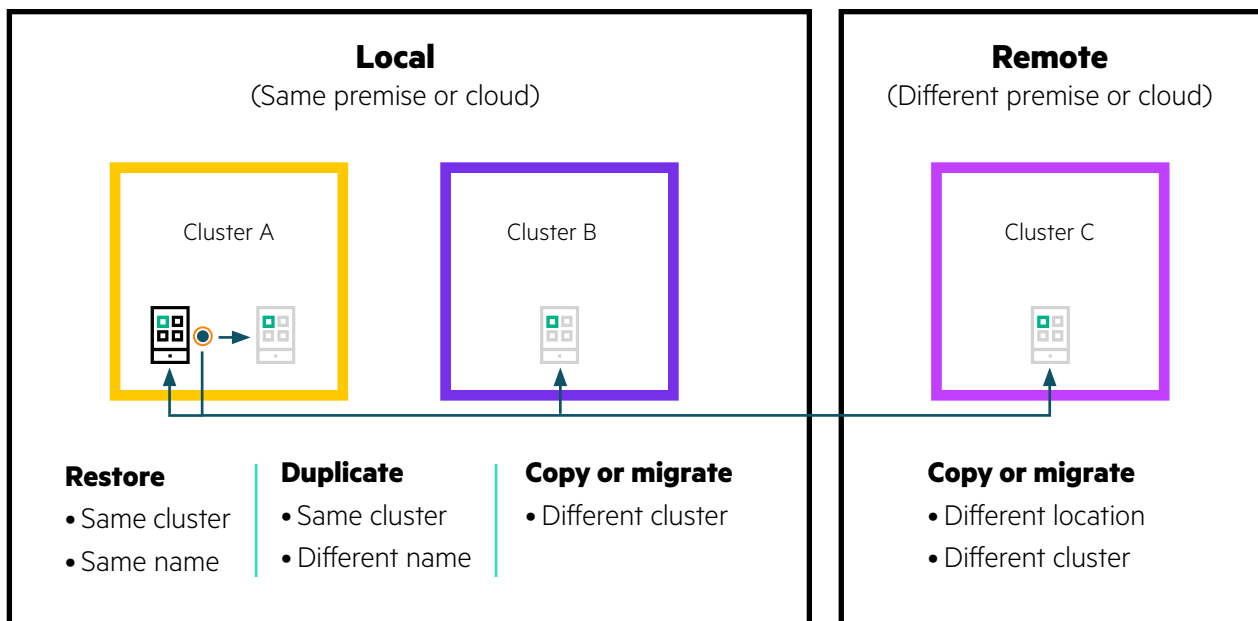

## WHAT TO PROTECT

### CONTAINER BACKUP CAN BE PERFORMED WITH VARYING LEVELS OF GRANULARITY

### CONTAINER RESTORES CAN BE PERFORMED IN VARIOUS WAYS

## HOW TO PROTECT

### HPE SOLUTION TO PROTECT CONTAINERS

Protect Kubernetes containerized applications and data with HPE and Commvault

#### HPE hardware platforms

**HPE ProLiant DL Servers** deliver a reliable, fast, and secure infrastructure solution for multi-application workloads

**HPE Apollo 4200 Servers** meet demanding HPC workloads with the right compute, flexible I/O, and storage options

#### Commvault data protection software

**COMMVault**

- Provide end-to-end enterprise-grade container protection
- Back up from wherever the containers live (on-premises, the cloud, or hybrid)
- Recover to wherever the containers are needed

The HPE plus Commvault solution provides a fully integrated scale-out platform supporting any backup and restore scenario for containers on Kubernetes, Rancher, and OCP environments with multiple benefits:

- Fully tested, validated, and optimized
- Maximum level of flexibility and granularity for container backup and restore
- Deployment and management in hybrid environments (public clouds and premise)
- Prescriptive guidance with technical white papers describing step-by-step implementation of container protection

And this is just the tip of the iceberg...
