HPE MANAGED CLOUD CONTROLS— CONTINUOUS COMPLIANCE

Compliance for a new paradigm

Managing compliance in the cloud can be a tremendous burden for organizations without the knowledge, skills, and tools to efficiently evaluate their cloud IT estate. Questions you may be asking are:

- How can I evaluate compliance across multiple cloud accounts and vendors?

- What strategies are available to understand and remediated out of compliance resources?

- How do I manage compliance when my teams can constantly turn on and off resources?

- Where can my teams go to see the status of their compliance against varying regulatory framework rules?

- How do I manage documentation for process rules?

- How can I easily prepare for an audit of my public cloud estate?

To thrive in today's cloud-focused world, enterprises are turning to an entirely new category of monthly managed services solutions that enables unprecedented visibility of and control over service management, IT compliance, and cost management in the cloud.

HPE Managed Cloud Controls offers two options for managing your cloud environment—Continuous Compliance and Continuous Cost Control.

Continuous Compliance provides visibility across the status of your governance, risk, and compliance (GRC) controls using frameworks such as National Institute of Standards and Technology (NIST), Payment Card Industry (PCI), and General Data Protection Regulation (GDPR). The service provides:

- Team of cloud GRC architects for remediation, gap analysis, and architecture planning

- Evaluation of client compliance needs and custom tailoring of frameworks as required

- Ongoing evaluation and updates of key operational and regulatory controls

- Support to accelerate your audit data gathering process, drastically reducing time and costs

- Customized dashboard to help ensure your executive and operational needs are met

- Ongoing monthly and quarterly assessments of compliance

VALUE PROPOSITION

Moving to the cloud presents a new set of challenges in managing the compliance of IT estates. With a near-instant ability to provision resources with nothing more than an internet connection and a credit card, your teams gain incredible agility and freedom to innovate. However, this benefit comes with increased risk and exposure to compliance violations. There are critical questions you will need to address, particularly if you are operating in a regulated industry about how you plan to manage your cloud:

- How will you detect provisioned resources that are out of compliance?

- How will you manage evaluating your cloud estate's compliance across multiple compliance frameworks?

- Do you know where to gather information about your cloud estate to prepare for an audit?

- How will you manage policies and documentation to attest to process rule compliance?

Continuous Compliance, which leverages HPE's experience in hundreds of cloud transformations, provides continuous monitoring of over 1,500 technical and process-based IT compliance, corporate governance and regulatory compliance controls. The service provides enterprise-level visibility and real-time alerting for GRC compliance information for your cloud environments. HPE maintains up-to-date policies from regulatory

organizations and helps ensure new cloud services and capabilities are covered by compliance frameworks. Additionally, HPE experts provide periodic reporting and recommendations as part of the service, providing you all the information you need to manage your compliance in the cloud.

BENEFITS

The Continuous Compliance service provides:

- Reduced time, cost, and complexity of audit preparation, with predictable results

- Continuous monitoring and alerting of out-of-compliance situations, with expert monitoring intervention and remediation

- Enterprise-level visibility of compliance via executive and operational dashboards

WHY HPE?

Continuous Compliance leverages experience and IP acquired through hundreds of successful cloud engagements. Through that experience we have:

- Completed hundreds of enterprise-wide cloud transformation projects

- Established partnerships with AWS, Azure, and Google™ cloud providers

- Amassed experience implementing and operating clouds

- Gained subject-matter experts with security and compliance experience and best practices knowledge for your cloud environments
